

The Secure Service-Oriented Architecture Benchmark Report

Business Value Point of View:

Service Oriented Architecture (SOA) creates business benefits within an existing application infrastructure. An SOA platform restructures the business value chain, which creates new pressures for secure business process flow control, metadata management, and service management within companies and between partner organizations.

This report will reveal the technologies and solutions organizations use to secure SOA. Key findings of this report will provide insights into:

- The secure SOA technology solutions and approaches used by organizations to facilitate change, shared services, and federated identity
- How to secure a loosely-coupled SOA architecture without tradeoffs in usability and access
- The importance of standards and out-of-the box integration for a secure SOA platform
- The connection between secure SOA and operation management and governance

Our Promise to Research Sponsors

- ✓ **Uncompromised integrity** through fact-based research only
- ✓ **Demand creation** and closed deals delivered through highly qualified leads for two months
- ✓ **Market validation** and impact with the business value of technology
- ✓ **Sales acceleration** through prospect education on delivered business value
- ✓ **Sales force effectiveness** delivered through "Results and Impact" workshop
- ✓ **Enhanced brand awareness** as a thought leader by logo and directory representation on the report

Research approach: The research methodology consists of a broad-based survey of enterprises either using or considering the purchase technologies to address risk management as well as interviews with end-users and IT vendors.

Our research network reach: This study will be marketed to Aberdeen's online community of Global 5000 executives and decision-makers, in addition to Aberdeen's affiliate research channel partners, with a total reach in excess of one million value chain executives.

End-user audience: Target readers include CIOs, CSOs, CROs, CTOs, corporate executives, IT managers, system architects, and information technology managers.

Time frame: 2Q06

Lead analyst: Stacey Quandt, Research Director, Security Solutions and Services
