

We're Celebrating 10 Years As The Leader In Parallel Processing.

Thanks To Some Of The World's Most Successful Companies.

We've been perfecting the standard in commercial massively-parallel processing for over ten years. More than 400 of our System 3600 and DBC/1012 systems, using our Teradata and merchant databases, are now installed at over 180 of the world's most successful companies. Enabling breakthrough applications conventional systems can't handle.

85% NCR*

SHARE OF COMMERCIAL PARALLEL PROCESSING MARKET

Now we're releasing fifth-generation hardware and software that substantially boosts total system performance and increases reliability and functionality. Meanwhile, our competition has yet to announce their first generation. That makes us far and away the best choice for commercial massively-parallel processing solutions that can help you get closer to your customers.

The sheer computing power of our massively-parallel processors has revolutionized the way our customers use computers. Some have discovered new ways to better understand and serve their customers. Some have used our systems to fundamentally redesign their operations. And some have achieved hundreds of millions of dollars in increased revenues.

Thanks to our customers, no company in the world can offer you more experience in commercial parallel processing solutions. For more information, phone 1 800 CALL-NCR.

"NCR is demonstrating not only that (parallel processing) is ready for commercial applications now, but that it is an attractive alternative encompassing what modern users are demanding: a robust computing environment, an open operating system, interoperability with other suppliers' systems, flexible expansion, and attractive price/performance."

Peter S. Kastner,
