

The new AT&T WorldMark™ Servers.

When you're hot, you're hot.

When you're hot, you're hot.

"The new WorldMark servers give AT&T one of the most scalable, compatible server product families in the marketplace."
International Data Corporation, November 1995

"AT&T's new WorldMark server line delivers attractive affordability.... WorldMark gives the IS buyer a new form of investment protection: insurance not only against a 'topped-out' architecture, but also against near to medium-term technology advances. WorldMark allows users to 'have it your way' with mix and match SMP, clustering, and MPP, and with relatively painless upgrades and flexible interoperability.... Aberdeen recommends that users take a close look at the renewed prowess of AT&T GIS' new WorldMark server line."

Aberdeen Group, September 1995

"WorldMark is a clear indication that AT&T is now back to what it knows best: the enterprise, scalable computing, and all on Intel-inside."

Dataquest, September 1995

"The WorldMark servers enable customers to gracefully scale their warehouses from SMP to clusters to MPP as their data warehouses grow in data volumes and complexity."

Patricia Seybold Group, October 1995
