GUEST TRACK	ON THE HORIZON	STRAIGHT TALK	THE GAME PLAN
<i>Presentations in partnership with leading experts, research and consulting firms</i>	<i>Executive briefings that identify emerging technologies, and their impact on business strategy</i>	<i>Straightforward explanations of key technologies and their business value</i>	<i>Practical advice and approaches for implementing new technologies</i>
Microsoft .NET: Impact on IT	Microsoft's Future Paths	Understanding .NET My Services	System Deployment With Directory-Enabled Client Management

Rocky Lhotka,
Magenic Technologies

Microsoft .NET: Impact on IT

Rockford Lhotka, Technology Evangelist for Minneapolis-based software development consultant Magenic Technologies, discusses the important new Microsoft .NET technology and strategy. Microsoft bills .NET as the platform for the next-generation Internet. It's too soon to tell if .NET will live up to its expectations, but this program explains the way .NET is supposed to work and what it can do for enterprise computing. Lhotka describes how Microsoft .NET can help overcome some common everyday IT challenges. He looks at how .NET can help hurdle interoperability roadblocks, simplify application development, lower the cost of deployment, simplify scalability, and increase application performance.

Paul DeGroot, Analyst,
Technical Journalist,
Directions in Microsoft

Jackson Shaw,
Microsoft

Microsoft's Future Paths

Jackson Shaw, Lead Product Manager for the Windows .NET Server Solutions Group at Microsoft, and Chief Research Officer Peter Kastner and Research Analyst Isaac Ro of the Aberdeen Group, discuss the future directions of Microsoft enterprise products. The program describes Microsoft's next generation of operating systems -- code-named Blackcomb and Longhorn -- as well as the emerging Tablet PC, and advances in speech recognition, knowledge management, and storage. In addition, the program looks at how .NET will tie together all these advances. In outlining the ways these initiatives will change computing, this presentation will help managers plot their upgrade paths and strategies over the next few years.

Naveen Kapoor,
PowerWeb, Inc.

David Chappell,
Chappell & Associates

Understanding .NET My Services

Consultant and author David Chappell of Chappell & Associates provides a close look at Microsoft's .NET My Services -- a new kind of platform for building a new kind of application. Microsoft .NET My Services consists of a network authentication service together with a group of SOAP-callable Web services that allow access to information. Applications can be built on these services that let end users access and share their own data from diverse software running on many different devices. In addition, applications that use .NET My Services can offer new kinds of services, allowing developers to create more powerful and more useful Web-based software. This program will give executives a head start in understanding the types of applications .NET My Services make possible, and how they can help a business run more efficiently.

Jonathan Goodyear,
ASPSoft Consulting

Jim Boyce,
Author

System Deployment With Directory-Enabled Client Management

Jim Boyce, Author/Co-author of more than 45 books on operating systems and computer technology, explains how to use Microsoft's Directory-Enabled Client Management (DECM) to automatically deploy applications and operating systems. In this program, Boyce describes the key technologies behind DECM and presents individual game plans for remote operating system installation and automated application deployment. In addition, he explains how to administer change and configuration management policies based on need and user location, implement software installation and maintenance, and administer user settings management. He also covers how DECM improves disaster recovery time. In an interview, Enterprise Technology Expert, Author, and Contributing Editor for Windows 2000 magazine Kathy Ivens offers her insights into Remote Installation Services, IntelliMirror, and automated application deployment.

Demystifying Microsoft Licensing	Working With Active Directory	Visual Studio .NET: An Introduction

Demystifying Microsoft Licensing **FEATURED PROGRAM OF THE MONTH**

Paul DeGroot, an Analyst and Technology Journalist with Directions on Microsoft, a research and consulting firm headquartered in Kirkland, WA, explains how Microsoft's updated and often confusing licensing policy works, and how to best manage the process of licensing software. DeGroot explains what you can and cannot do, and how to make smart decisions about licensing. He discusses recent controversial changes to Microsoft's licensing programs and offers advice for dealing with them. The program goes into detail on the features of Microsoft's volume licensing policies, options available when upgrading Microsoft software, and factors to consider when selecting a licensing program. In an interview, Mark Sager, a Senior Engineer at Savant Solutions, a New York-based technology service provider, adds his insights on Microsoft's volume licensing programs.

Working With Active Directory

Naveen Kapoor, CEO and President of PowerWeb, Inc., explains why directory services are vital for today's networked organization, and discusses how best to plan, implement, manage, and secure Microsoft's Active Directory (AD) services in the enterprise. In interviews, Jackson Shaw, Lead Product Manager for the Windows .NET Server Solutions Group at Microsoft, and Neal Goldman, Director of Application Infrastructure and Software Platforms, The Yankee Group, offer their insights on AD in terms of its scalability, improved security, and the technical tools it provides to the enterprise network architect. Viewers of this program will learn how to save time and overcome common obstacles when deploying this key Windows feature.

Visual Studio .NET: An Introduction

Jonathan Goodyear, President of ASPSoft Consulting, and a Contributing Editor of Visual Studio magazine, describes the new Visual Studio .NET features and explains how and when to use them. Visual Studio .NET is Microsoft's integrated development environment used to build enterprise solutions with the technologies in Microsoft's .NET initiative. It is designed to streamline developer productivity by providing tools to handle each stage of the project development life cycle. In this program, Goodyear explains Visual Studio .NET's role in Microsoft's .NET initiative, offers a walk-through of the Visual Studio .NET interface, and introduces some of the suite's new and enhanced features. By watching this program, you will learn just how powerful, versatile, and easy to use Visual Studio .NET is, and you'll gain the necessary background to get you started building your own .NET applications.
